Pro-active Security Through Technology

24/7 Security Services is happy to report an increase in the successes and positive arrests made through information provided by AI technology.

Technology has become an essential tool for the security industry, and the Vumacam network is an important component of our public space crime-fighting strategy. While the system provides real-time alerts, the core of our successes lies within three primary 24/7 Security divisions and how they respond to the alerts.

The 24/7 Security Command Centre plays a vital role in receiving and monitoring alerts and communicating with the relevant stakeholders. We are

directly linked to the public space monitoring network, the Vehicles of Interest (VOI) Database and Automatic Number Plate Recognition (ANPR).

In-vehicle Automatic Number Plate Recognition (ANPR) enables the 24/7 Security units to receive alerts while in direct in contact with the 24/7 Command Centre.

The 24/7 Security Armed Reaction Units are responsible for responding to alerts. These units are in direct contact with the 24/7 Command Centre and work closely with law enforcement agencies.

Several of our communities are part of the Vumacam network. With the general increase in crime, 24/7 Security is seeing the benefits of using this technology on a daily basis. We encourage communities to join the network - the more extensive the network, the better it will support security service providers and law enforcement to clamp down on crime in public spaces.

- AI Surveillance - Taking Security to the Next Level

24/7 Smart Surveillance is an AI technology that enables CCTV systems to intelligently assess an environment and notify the 24/7 Command Centre of an intrusion. The technology draws immediate attention to unauthorised activity, allowing us to intervene and react before a crime occurs.

In contrast, traditional means of CCTV surveillance only cater for investigations after the crime has occurred, in many cases having costly consequences for the business or homeowner.

While the technology behind proactive off-site video monitoring is sophisticated, the way it prevents potential crimes is easy to understand:

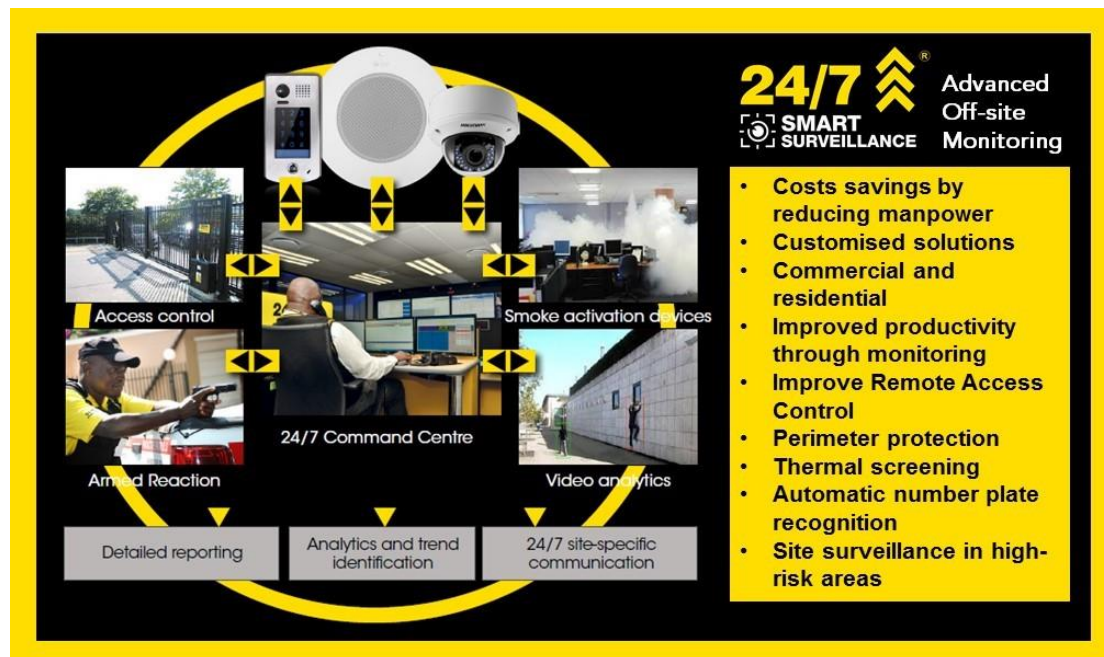

1. A potential threat approaches the perimeter of your site or property.
2. This threatening activity is picked up by AI technology.
3. An alert is sent within seconds to the 24/7 Command Centre.

4. The operator assesses the threat over a live video feed and actions the required response – audio warning, notify on-site Guards, Armed Reaction deployment etc.

Proactive monitoring systems can be armed and disarmed for specific types of activity and certain times of the day. This is especially useful for business owners because it allows them the control to set the system to arm outside of business hours.

Video surveillance can be divided into two categories - proactive and reactive. Reactive video systems solely rely on surveillance footage of the crime after it has taken place and cannot prevent a crime occurring.

Proactive video monitoring, such as 24/7 Smart Surveillance, differs from reactive monitoring because the intelligent detection software employed behind each camera effectively turns it into a 24/7, 365-day security guard.

Peace of mind in the palm of your hand

The 24/7 ePOD emergency panic system is an affordable tailor-made solution that provides you access to help when you need it most. No cell phone required!

A panic system is only effective if it provides for easy activation and fast response. In today's world, it is essential to have access to a panic system 24/7 - whether you are at home, at work, or out there cycling, running or walking.
