

# SPECIAL OPERATION REPORT

General information				
Location	WOODROCK	Specific area or site	SANRAL RESERVE	
Date of Operation	5 JUNE 2020		Time Of Operation	19h00 – 20h00
Type of Operation	DRONE/K9 ComOp			

## Description of event (Give a brief description of the incident)

### Operation Objective

To patrol the SANRAL Reserve to inspect the weakspots identified in the last operation and look for any new signs of activity.

### Observations and/or Outcome:

Fig 1: Parade Carried out 19h00

**Fig 2:** The Barbed wire fence is still compromised in several places.

**Fig 3:** Bushsleeper found sleeping dangerously close to the highway and asked to move on which he did.

**Recommendations :**

- The properties on the corner of the SANRAL reserve and Riley Road still to be encouraged to install perimeter protection of some sort
- **Fig 2:** The barbed wire strands have been cut and should be repaired asap.
- The dead tree across a section of the barbed wire fencing was removed and that section of fence repaired.
- The perimeter fencing remains compromised by overgrowth of vegetation, this all needs to be cut back and maintained regularly so as to not compromise the area's security.
- The missing palisade pole at the Eskom transformer remains a concern, however the padlock on the inside gate remains intact.
- The storm drain links the squatter camp across the road to the SANRAL reserve remains a concern. I would suggest an engineer have a look at it and advise if there is anything that can be done to "human proof the tunnel."

Other than the Bush Sleeper we found near the highway there was no new evidence found of criminal activity in the

reserve.

**Initial Notification by**

**Author of Spec Ops Report:**

Sean Mooney

**Date:**

15 JUNE 2020

**Time:**

09h04
